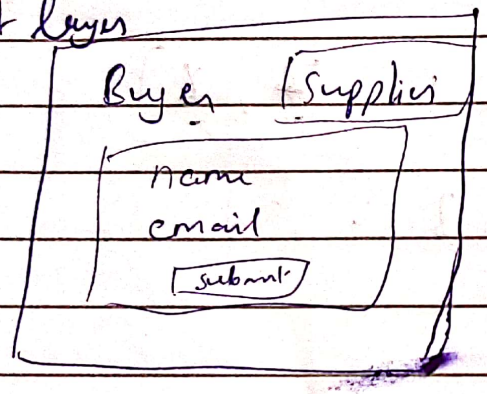
Auth layer

1 Client layer



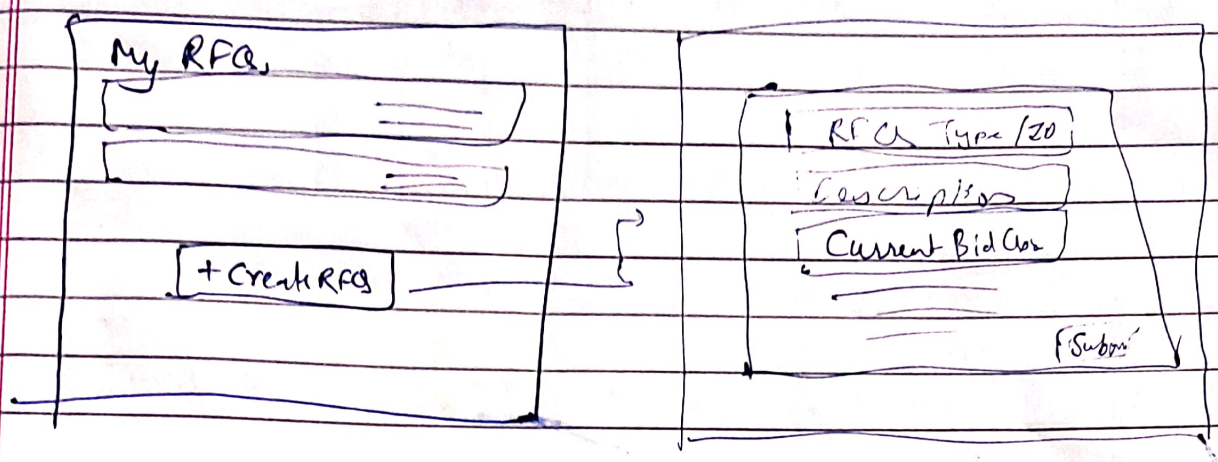
Role Based Auth (RBAC)
→ Buyer
→ Supplier

2) Appl^n layer → Node.js / Express

3) Data layer – Mongo DB

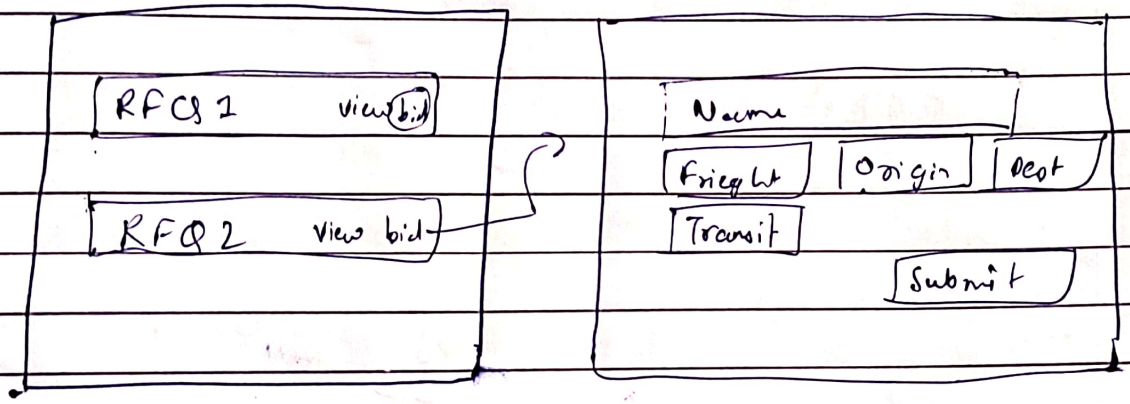
Scanned with OKEN Scanner

Buyer



After RFQ is created by User

on Supplier Side 1



After Quote Submission

in backend

it will fetch previous quotes from various supplier

					Rank
Supplier	1	→	Quote	→ 5500	1
Supplier	2	→	Quote	→ 6000	3
	3	→	Quote	→ 5700	2

A Ranking will be made

if the ~~U~~ Supplier sees Another lower Bid they can compete

Now Suppler 2 again Bid → 5000 & Ranking Update

			Rank
supplier 2	→ Quote	→ 5000	1
1		→ 5500	2
3		→ 5700	3

If Timer is near to End & ~~Ra~~ Supplier Bids such as

	hour	min	sec
Time Rem :	00 :	02 :	59

Supplier 4 → Bids → 4500

Now Ranking Update Timer Extend by X min

Now Time Rem : 00 : 07 : 59
